THE PROBLEM SOLVER LANIER TEL-EDISSETTE® SYSTEM

Most executives have one common problem...squeezing 12 hours work into an 8-hour day.

Lanier's solution to that problem is the Tel-Edisette system.

Tel-Edisette is the most widely accepted standard cassette, dictation system in use today. The first recorder of its kind featuring automatic change plus 12 cassette loading...for 6-hour capacity and convenient work distribution.

The modular design of the Tel-Edisette system adapts to your specialized needs. Lanier helps you design a system using a

combination of dictation input phones, recorders, transcribers and a new video control unit called the Monitor.® Each system component delivers superior performance and state of the art technology. Together they help speed up paperwork with far greater efficiency than any other system.

Newest Feature

Input/Time Mode Selection allows an additional programming option for supervisors. Set the selector on time and cassettes will eject by percent of completion. Example, when the program dial is on 6, the cassette would eject after reaching 60% capacity and the originator hangs up. When the "units" mode is selected, the cassette would eject after the 6th document has been recorded.

THE SYSTEM

Input choices

Five types of direct wire input stations with options:

- Single input station with optional automatic selection of any available recorder
- 3-way manual select
- 6-way manual select
- Desk-Conference microphone
- Hand microphone

Telephone Dictation

- Off premises-phone-in message system or complete tone controlled dictation
- Internal telephone input full control dial or tone coupled interfaces

Monitor® Control

The first video control unit of its type using microprocessor technology.

It makes the impossible possible by keeping track of all the dictation, letters and other paperwork that flows through your center. Monitor tells you who

the originator is and who's typing the work. It tells you when work entered the system, how long it is and precise turnaround. A permanent print-out from an electrostatic printer gives department and transcription output summaries for chargeback and hard copy for management reports.

Transcription

The end result of dictation input is clear, precise voice reproduction with electronic cues that allow secretaries to automatically print a program that "blue prints" the cassette to help organize typing tasks. This job is accomplished easily with Lanier's Time Commander — the finest desk top transcriber available. When originators also use mini or micro cassette portables in their travels, Time Commander has a plug-in Companion Unit that converts the transcriber to other cassette sizes in records. This means that Lanier will meet all your needs with full product compatibility and quality.
